5. DISCUSSION

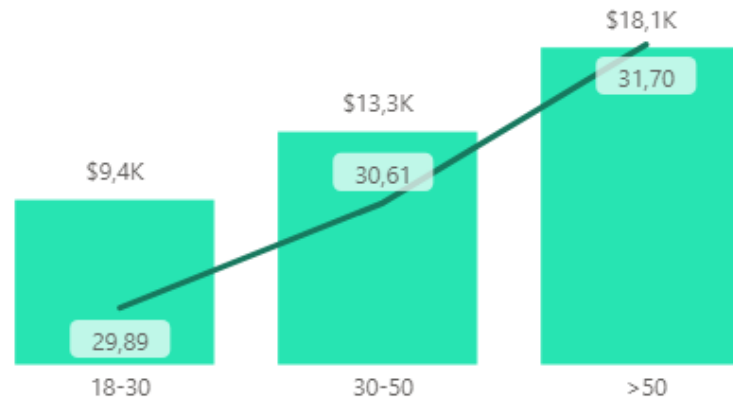

- How Age affects Health Insurance Cost?
- Obese rate in adult people.

5. DISCUSSION

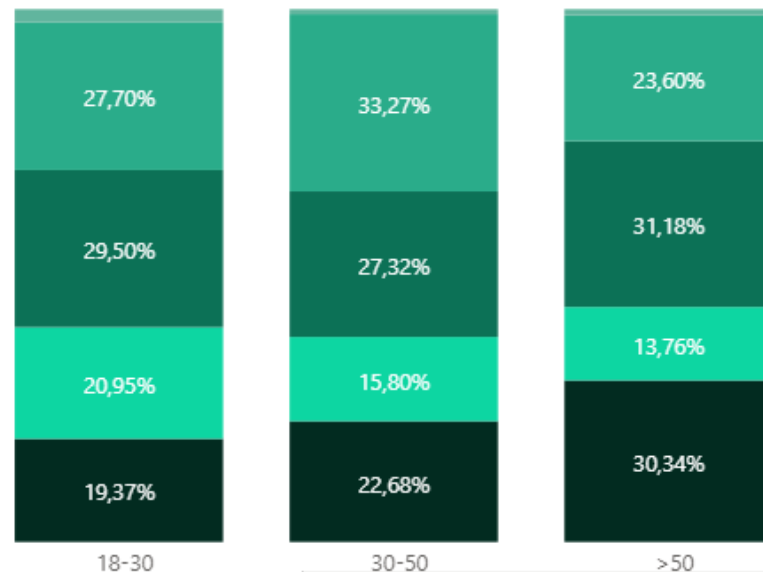

Average Charges and Average BMI by age_categories

● Average Charges ● Average BMI

% Number of People by age_categories and bmi_categories

bmi_categories ● ExtremelyObese ● Normal ● Obese ● OverWeight ● UnderWeight

- Average charges and average BMI increased with age categories. For people **over 50**, the average charge was **\$18.1K**, compared to those aged **18-30** it doubled, just **\$9,4k**. It means the older you are, the higher your medical quotes.
- The obesity prevalence (extremely obese, obese, over weight) was **76.12%** among adults aged **18-30**, **83.27%** among adults aged **30-50** and **85,12%** among adults aged **50 and older**.
- Nowadays, people are so busy and they use fast food so much and lazy to workout. This is one of the reasons that make them easily get diseases like obesity or heart disease.

6. CONCLUSION

- The biggest factor that influences your health insurance quote will be your age.
- The highest obesity prevalence was 85,12% among adults aged 50 and older.
